

VortexIQ Onboarding Guide for New Teams v1.0

Section 1: Setting Up Your Workspace

After signing up your workspace is created automatically with your company name.

To rename your workspace go to Settings then Workspace then General.

Add your company logo from Settings then Workspace then Branding.

Set your workspace timezone from Settings then Workspace then Preferences.

Workspace URL is fixed at signup and cannot be changed later.

Section 2: Inviting Your Team

Start inviting team members from Settings then Team then Invite Members.

You can invite up to 10 members at once by entering comma-separated emails.

Each invitee receives an email with a link valid for 7 days.

Pending invitations can be resent or cancelled from the Team page.

Set the correct role before sending the invite to avoid permission issues.

Free plan allows up to 2 team members. Upgrade for larger teams.

Section 3: Creating Your First Project

Click New Project on the dashboard to create your first project.

Choose a clear descriptive name that reflects the project goal.

Set visibility to Private for sensitive projects or Public for open collaboration.

Add a description so team members understand the project scope.

Projects can be organized into folders from the dashboard view.

Pin important projects to the top of your dashboard for quick access.

Section 4: Setting Up Integrations Early

Connect Slack in the first week so notifications reach your team automatically.

GitHub integration is recommended for engineering teams from day one.

Google Workspace SSO removes the need for separate VortexIQ passwords.

All integrations are set up from Settings then Integrations.

Test each integration after connecting by triggering a sample event.

Section 5: Training Your Team

VortexIQ offers free onboarding webinars every Tuesday at 2pm GMT.

Register for webinars at help.vortexiq.com/webinars.

Video tutorials for all features are available at help.vortexiq.com/videos.

The VortexIQ certification program is available at learn.vortexiq.com.

Certification is free for all paid plan users.

Assign the certification to all team members in their first month.

Section 6: Best Practices for New Workspaces

Create a naming convention for projects before your team starts adding them.

Set up at least one Admin and one backup Admin from day one.

Enable two-factor authentication for all Admin accounts immediately.

Create a general project for team-wide announcements and resources.

Schedule a monthly workspace review to archive inactive projects.

Use the audit log to monitor activity during the first month of onboarding.

Section 7: Getting Help During Onboarding

Enterprise customers have a dedicated onboarding manager for the first 90 days.

Pro customers can book a free 30-minute onboarding call at help.vortexiq.com/book.

The help center at help.vortexiq.com has step-by-step guides for every feature.

Join the community forum at community.vortexiq.com to connect with other teams.

Email support@vortexiq.com for any setup issues during your first 30 days.
